

# FastPac™ DI<sup>880</sup> Inserting System

Versatile, fast and easy to use

# Versatile, fast and easy to use: The FastPac™ DI<sup>880</sup> is the most compact inserting solution for flats and direct mail

With a host of unique features, the FastPac™ DI<sup>880</sup> possesses capabilities previously found only in large and expensive systems. First and foremost it can handle up to 3600 C4 or C5 mail pieces per hour. It can also process packages from DL up to B4, its flexibility making it ideal for direct mail applications. When used on line with the tower feeder and the booklet feeder, the FastPac™ DI<sup>880</sup> can feed and collate up to seven individual flat or pre-folded documents into either wallet or pocket envelopes automatically. Hand fed, it can take up to 12mm thick packages of 80gsm media and can handle combinations of catalogues, magazines, booklets, reply cards/envelopes and flat or pre-folded documents.

The array of features and productivity found within this compact, operator friendly and cost-effective unit make it the ideal inserter for most mailing needs in direct mail companies, distribution centres, in-house mailing operations, quick printers and copy shops.

The DI<sup>880</sup> is the ideal machine to help you take advantage of Royal Mail's Large Letter discount tariffs. If you send more than 250 Large Letter items we can help you save up to 8p on every one.

**Tower Feeder**.....  
A 6 bin A4 feeder with various feeding options - single feed, or collation. The linked feeder mode allows feeders to cascade for even greater productivity. It can even handle DL slips, or pre-folded items. Misfeed and double detection ensure that collations contain the correct number of pages.

**Booklet feeder**.....  
Combined with the tower feeder, this offers a fully automatic system for inserting a collated set of sheets plus a catalogue or booklet up to 8mm thick.

**Manual Feed Option**.....  
For smaller jobs or pre-sorted sets this option enables the operator to hand feed items. It also provides the ability to include non-standard sized materials or giveaways with your mailings.

**Foot Pedal**.....  
For added flexibility and to give the operator more control, the foot pedal can manually activate a single cycle of the inserting operation when for example, an insert is handed.

**Envelope Feeder**

The envelope feeder can accommodate as much as 150mm of envelopes from DL to B4. Top load and bottom feed allows the FastPac™ DI<sup>880</sup> inserter to run continuously without stopping for reloading.

**Advanced Verification System**  
By adding the AVS option documents can be tracked by comparing the Output Scan Log against a Master Print File - ideal when a manifest or re-print capability is needed.

**Stacker**  
Various stacker options available, including a high capacity (2,500 envelopes) belt stacker for high volume runs. The high capacity stacker can be positioned inline or at left or right angles to accommodate various applications or room layout.

**Display**  
Fast, easy setup for different jobs thanks to the central LCD panel and automated machine settings. Simple menu with storage for 24 jobs makes small batch and repeat jobs fast and affordable.

## Pitney Bowes

Engineering the flow of communication™

Pitney Bowes
